TECHNICAL DATA / BLACK-AND-WHITE FILM

March 2023 • ED-BWF

The following are starting-point recommendations for processing KODAK PROFESSIONAL Black-and-White Films with KODAK Chemicals. For best results, make tests to determine the best development time for your application.

Note: Development times shorter than 5 minutes may produce unsatisfactory uniformity.

Roll Films: Small Tank Film Processing (Intermittent Agitation for Tanks That Can Be Inverted)

KODAK PROFESSIONAL Film	Film Code	Development Time (Minutes)				Reference Publication
		20°C (68°F)		24°C (75°F)		
		KODAK PROFESSIONAL XTOL Developer	KODAK PROFESSIONAL D-76 Developer	KODAK PROFESSIONAL HC-110 Developer (Dilution B)	KODAK PROFESSIONAL T-MAX Developer (1:4)	
T-MAX 100 	100TMX	7 1/2	6 1/2	6	6 1/4	F-4016
T-MAX 400 	400TMY	6 1/2	7 1/2	5 1/2	5 1/2	F-4043
TRI-X 400 	400TX	7	6 3/4	6	4 3/4	F-4017

TRI-X 320 	320TXP	6	6	6	NR	F-4017

Final Steps in Processing Black-and-White Film

Step/Solution	Time (min:sec)	Temperature	Comments
Rinse/stop bath	0:30	18 to 24°C (65 to 75°F)	Agitate continuously. Rinse with a stop bath such as: <ul style="list-style-type: none"> • KODAK PROFESSIONAL Indicator Stop Bath (1:63)
Fix	2:00 to 4:00* with a liquid-concentrate (L) fixer -OR- 5:00 to 10:00* with a powder (P) fixer		Agitate continuously for the first 30 seconds and at 30-second intervals after that with a hardening fixer such as: <ul style="list-style-type: none"> • KODAK PROFESSIONAL Rapid Fixer (liquid) • KODAFIX Solution (liquid) • KODAK PROFESSIONAL POLYMAX Fixer (liquid) • KODAK PROFESSIONAL Fixer (powder) Fix for twice as long as it takes the film to clear (lose its milky appearance). See instructions for the specific fixer. IMPORTANT: With KODAK PROFESSIONAL T-MAX Films, fixer will be exhausted more rapidly than with other films. If negatives show a magenta (pink) stain after fixing, fixer may be near exhaustion, or fixing time is too short. If the stain is pronounced and irregular, refix the film in fresh fixer.
Rinse	0:30		Rinse the film in the tank under running water.
Wash aid	1:00 to 2:00		Treat with KODAK PROFESSIONAL Hypo Clearing Agent. Agitate continuously for the first 30 seconds and then at 30-second intervals.
Wash	5:00		Run the wash water at least fast enough to provide a complete change of water in the container in 5 minutes. For rapid washing in a small tank, fill the tank to overflowing with fresh water and then dump it all out. Repeat this cycle 10 times.
Final rinse/wetting agent	0:30		To minimize drying marks, treat the film with KODAK PROFESSIONAL PHOTO-FLO Solution after washing. Provide gentle agitation for 5 seconds of the total time.
Dry	—		Hang the film to dry film in a dust-free place. You may wipe the surfaces carefully with a soft viscose sponge to remove excess liquid. Store dry negatives in sleeves or envelopes away from dust and extreme temperature and humidity.

* Times are approximate. Refer to the film or developer instructions.
